Vishal Kumar Kamishetti

Hyderabad, TG | 9701766554 | vishalk200416@gmail.com | LinkedIn | GitHub

Hardworking and passionate job seeker with strong organizational skills eager to secure entry level as a developer. Ready to help team achieve company goals.

Detail-oriented team player with strong organizational skills. Ability to handle multiple projects simultaneously with high degree of accuracy.

Educational Qualifications

Graduation | Gurunanak Institute of Technology, Hyderabad **2022-2026**

B.Tech in Computer Science and Engineering (AI & ML) | 8.76 CGPA

Intermediate | Narayana Junior College, Hyderabad **2020-2022**

Intermediate in MPC | 97.1%

Technical Skills

- **Programming Languages**: Python, C
- **Backend Development**: Fast API, Object-Oriented Programming
- **Frontend Development**: HTML5, CSS3
- **Databases**: MS SQL Server
- **Machine Learning & AI**: NumPy, Pandas, TensorFlow, Keras, CNNs, Transfer Learning
- **Tools & Platforms**: GitHub, VS Code, Excel, Power BI
- **Communication Skills**: English, Telugu, Hindi

Projects

Neuroimaging meets AI: Deep learning for forecasting MCI in cognitively normal subjects

- Developed a deep learning-based predictive model to identify the risk of **Mild Cognitive Impairment (MCI)** in cognitively normal individuals using neuroimaging data.
- Applied **Convolutional Neural Networks (CNNs)** and machine learning techniques to analyze MRI/PET brain scans and detect early signs of cognitive decline.
- Performed data preprocessing, image normalization, feature extraction, and model training to improve prediction accuracy. Evaluated model performance using metrics such as Accuracy, Precision, Recall, F1-Score, and ROC-AUC.
- Leveraged **Python, TensorFlow/Keras, NumPy, Pandas, and Scikit-learn** for model development and data analysis.
- Demonstrated the potential of AI-powered healthcare solutions for early detection of neurodegenerative diseases and Alzheimer's progression.

A Deep Learning-Driven approach for Large-Scale Land Use and Land Cover Classification

- Developed a scalable LULC classification pipeline using **Convolutional Neural Networks (CNNs)** on high-resolution satellite imagery.
- Employed **TensorFlow/Keras** for model development and **OpenCV/GDAL** for geospatial image preprocessing and augmentation.
- Utilized **transfer learning** with pretrained models (e.g; ResNet, VGG) to improve accuracy on limited labeled datasets.
- Integrated **geospatial data handling** using **GeoPandas** and **rasterio** for efficient large-scale data processing.
- Achieved significant classification accuracy and performance metrics; results visualized with **matplotlib** and GIS tools.
